ABOUT US

The Flood Competence Center is a non-profit association from Germany that connects flood-affected citizens and stakeholders in flood risk management to build a unique network.

The HKC was founded in 2007 and consists of almost 200 members and cooperations.

The members of the HKC are composed of national and international institutions and municipalities, citizens and policy-makers, universities, economy and insurance companies. The HKC brings together science and practice for the purpose of holistic flood risk management, promoting sustainable development and the provision and transfer of expertise.

Use the knowledge of our network for your projects. We are glad to support you. We look forward to welcoming you.
